

HOOT Decentralized uncensorable zk distributed computing live-streaming powered by Blockchain

Open Sourced Network allowing anyone to rent their unused Network traffic and compute, while providing a secure connection for those in need

Hoot peer to peer Network

- Hoot foundation is developing Hoot Network – an Open source software, powering a Decentralized Network of livestreaming and distributed computing Nodes.
- Hoot Network acts as a marketplace, its Open Source software allows anyone to join the network both as a provider – selling unused network traffic, cpu or as a customer – buying live-streaming and distributing computing service from other Hoot Network providers.

Hoot peer to peer Network

- Hoot Network is based on a complex architecture revolving around P2P, Blockchain, Smart Contracts, State Channels, etc..
- Read our White paper for a detailed description on how the protocol will enable the creation of completely decentralized live-streaming network, powered by decentralized micro payments using Bitcoins, ETH and block-chain.

Centralized vs Decentralized

Facebook/Twitter

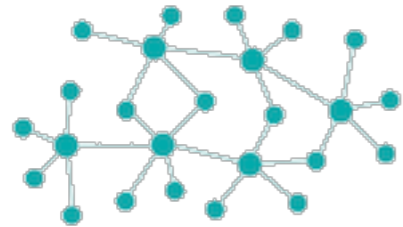

- Focus on Shareholder benefit
- Your private data in everyone hands
- Simplified access to your data for third parties
 - High profit margins
 - **Heavily censored**
- Not fault tolerant and not peer to peer

Hoot Decentralized

- Focus on Network participant benefits
 - Your Private data is Decentralized
- Restricted access of your data for third parties
 - Perfect competition sets fair price
 - **Censorship-free**
- a dense Byzantine fault tolerant peer-to-peer network

Values

Decentralized

Infinately Scalable,
built using P2P
architecture.
Without single
point of failure – no
central company or
server.

Open Source

All source code
is always
visible,
empowering
contributions
and 100%
transparency.

Designed for privacy

Powerful encryption,
Node Reputation,
Layered Protection
Protocols, etc.. All
working to help you
safely and privately
participate in the
Network.

Hoot tokens

Decentralized hoot nodes will earn crypto-token incentives HOOT Coins

- for contributing their processing power and bandwidth in the service of encoding and distributing video using the Hoot Live virtual machine
- for participating in the hoot security protocol
- much like miners in Bitcoin and Ethereum earn token for mining the cryptocurrency in exchange for breaking complex math puzzles
- Hoot tokens are **paid API keys not securities** you can redeem Hoot tokens for compute time/bandwidth on the decentralized Hoot compute network

Budget

| | |
|---|-----------|
| Token sale site | 20,000 |
| Hoot network Token math model compensation for | 10,000 |
| Swiss foundation - administrative | 15,000 |
| White paper | 10,000 |
| Token sale press | 20,000 |
| Reach out via forums ann format social media marketing | 25,000 |
| Video, other promotional materials | 20,000 |
| Total | \$120,000 |
